DETAILED ACTION

Inventorship

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

2. The disclosure is objected to because of the following informalities: in page 6, lines 25 31, please provide updated information of the US Patent Applications.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Mucci et al. (US 6,512,854 B1).

Art Unit: 3737

In regard to claims 1-3, 10-11, 13-16, and 23, Mucci et al. (hereinafter "Mucci") teaches an ultrasound method for automatically determining a transmitter power level (col. 9, line 57 - col. 10, line 13) comprising the steps and structures for determining a noise level or an excess signal-to-noise ratio with a processor (24); determining a lowest value of a display dynamic range (col. 8, line 17 - col. 9, line 9); and then determining the transmitter power level or power reduction factor as a function of the noise level and the lowest value or as function of the excess power.

In regard to claims 5-9, 17-22, and 24, the specific limitations of the steps of iterative reduction of transmit power; determining the difference between a first signal at a default power level and a second signal at a power level responsive to the iterative step; acquiring a plurality of receive samples with transmitter off; etc. would be inherently taught by the method of automatic transmitter power determination of Mucci.

In regard to claims 4 and 12, Mucci teaches the steps and structures for automatic gain control (col. 3, line 55-56).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ali Imam whose telephone number is 703-305-0028. The examiner can normally be reached on Mon. - Th., 8:00- 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marvin Lateef can be reached on 703-308-3256.
